1950 PULPWOOD PRODUCTION IN THE SOUTH

William S. Stover

UNITED STATES DEPARTMENT OF AGRICULTURE
FOREST SERVICE

SOUTHERN FOREST EXPERIMENT STATION
Harold L. Mitchell, Director New Orleans, La.

and

SOUTHEASTERN FOREST EXPERIMENT STATION
E. L. Demmon, Director Asheville, N.C.

in cooperation with

SOUTHERN PULPWOOD CONSERVATION ASSOCIATION
Atlanta, Ga.

PREFACE

Through the McSweeney-McNary Act of 1928, Congress authorized the Secretary of Agriculture to conduct a survey of the forest resources of the United States. The Forest Survey was organized by the Forest Service to carry out the provisions of the Act. The Southeastern Forest Experiment Station, Asheville, North Carolina, is responsible for the work in Virginia, North Carolina, South Carolina, Georgia, and Florida. The Southern Forest Experiment Station, New Orleans, Louisiana, directs the work in Alabama, Arkansas, Louisiana, Mississippi, Oklahoma, Tennessee, and Texas.

The work of the Survey is divided into five major phases:

1. Inventory. Determination of the extent, location, and condition of forest lands, and the quantity, species, and quality of timber on these lands.

2. Growth. Determination of the current rate of timber growth.

3. Drain. Determination of the amount of industrial and domestic wood used, and the total loss resulting from fire, insects, disease, suppression, and other causes.

4. Requirements. Determination of the current and probable future requirements for forest products by all classes of consumers.

5. Policies and plans. Analysis of the relation of these findings to one another and to other economic factors as a basis for public and private policies and plans of forest land use and management.

ACKNOWLEDGMENT

The statistics presented herein are based upon reports furnished by the wood procurement officials representing 61 mills located in, or drawing wood from the South. Reports showed either production by county or by shipping points which were used to assign production to counties. County data are approximate, but totals for small groups of counties should have little error.

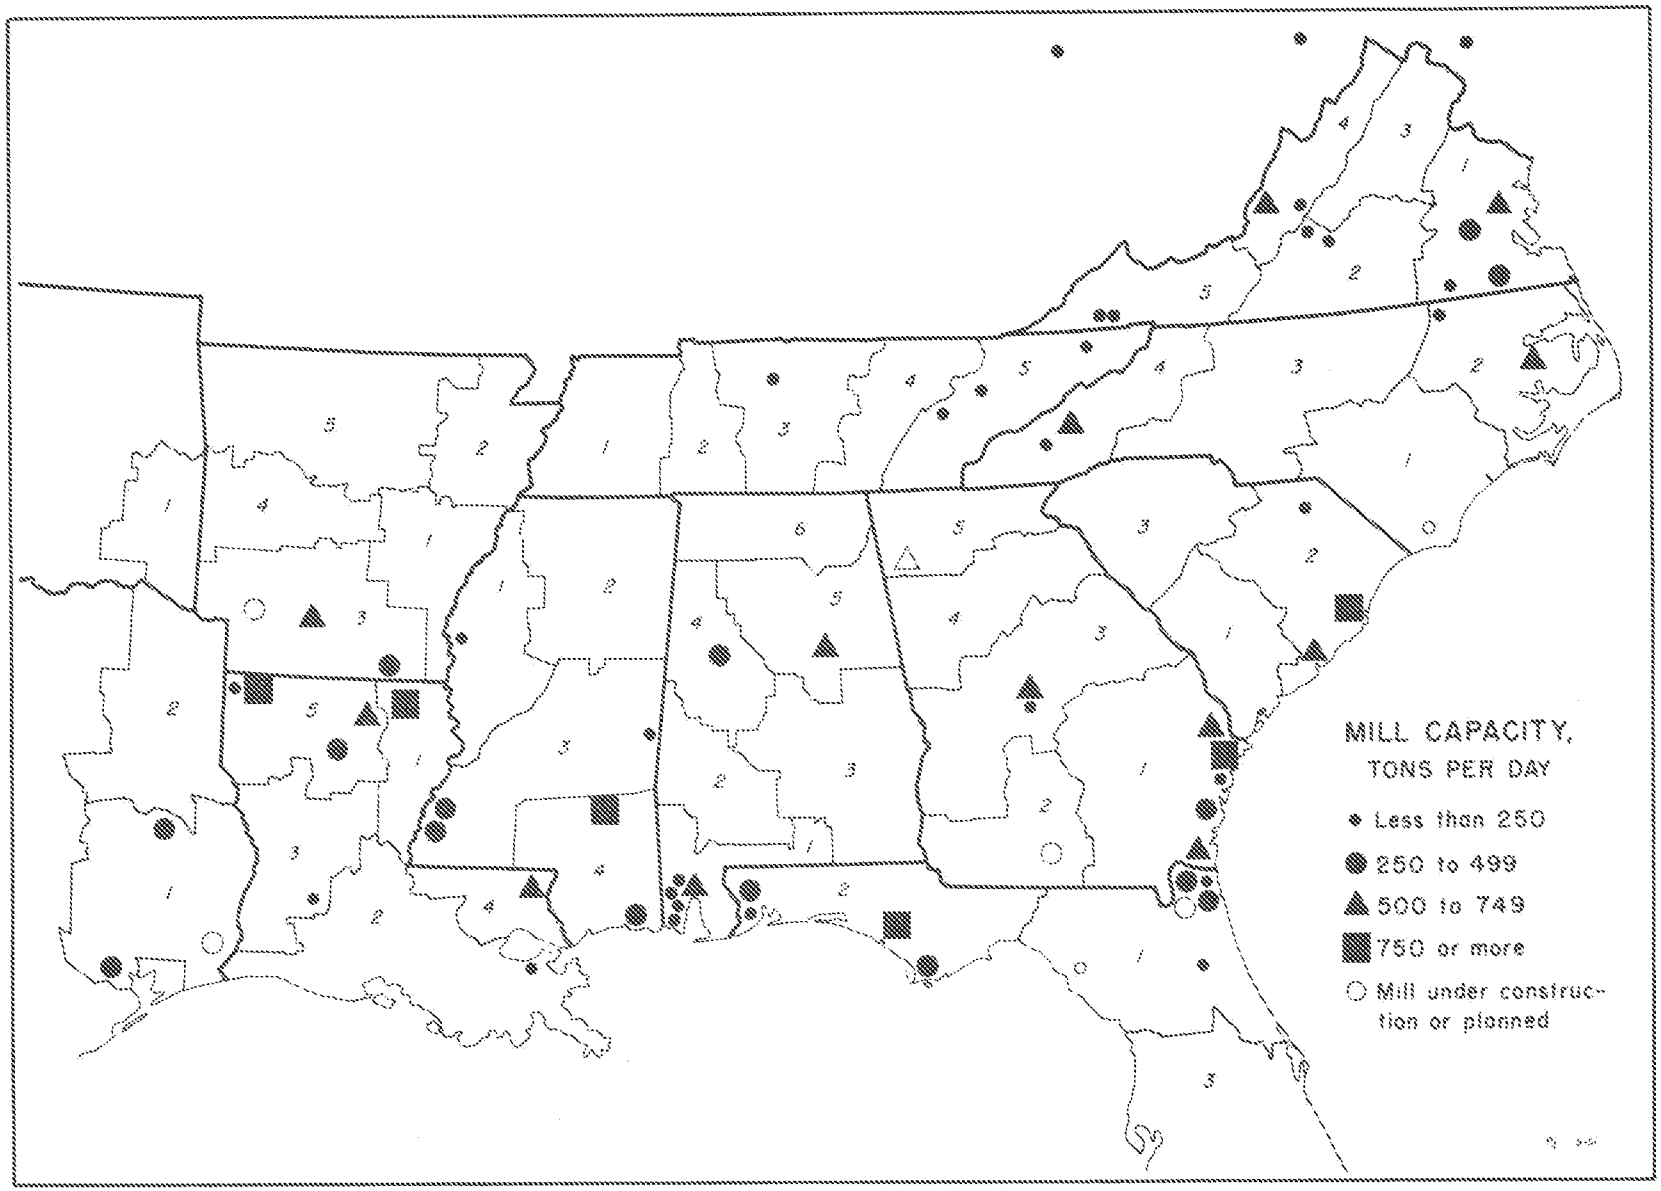

Figure 1.—Pulp mills drawing wood from the South, 1950. Numbered areas are Forest Survey regions.

1950 PULPWOOD PRODUCTION IN THE SOUTH

In 1950 pulpwood production in the South rose to an all-time high of 12,435,700 cords, an increase of 25.3 percent above 1949, and 9.5 percent above the previous record year of 1948. The production of pine pulpwood was 11,170,400 cords, of hardwood 1,111,600 cords, and of dead chestnut 153,700 cords. Pine production was 24.9 percent above 1949, hardwood 37.4 percent more, and chestnut 9.3 percent less.

Since total receipts of domestic pulpwood at all mills in the United States were 20,714,000 cords in 1950, the South produced 60 percent of all the pulpwood cut in the Nation. Among the southern States, Georgia was the largest producer, accounting for almost 18 percent of the South's and 11 percent of the Nation's pulpwood cut (table 1). The other southern States, except Tennessee, showed an increase in production over 1949. The largest increase was in Alabama.

Production per county varied from none to nearly 190,000 cords. Twenty-six counties, distributed throughout the South, had cuts of over 60,000 cords apiece. The five leading counties were Baldwin and Mobile in Alabama, Georgetown and Fairfield in South Carolina, and Nassau in Florida (fig. 3, p. 28).

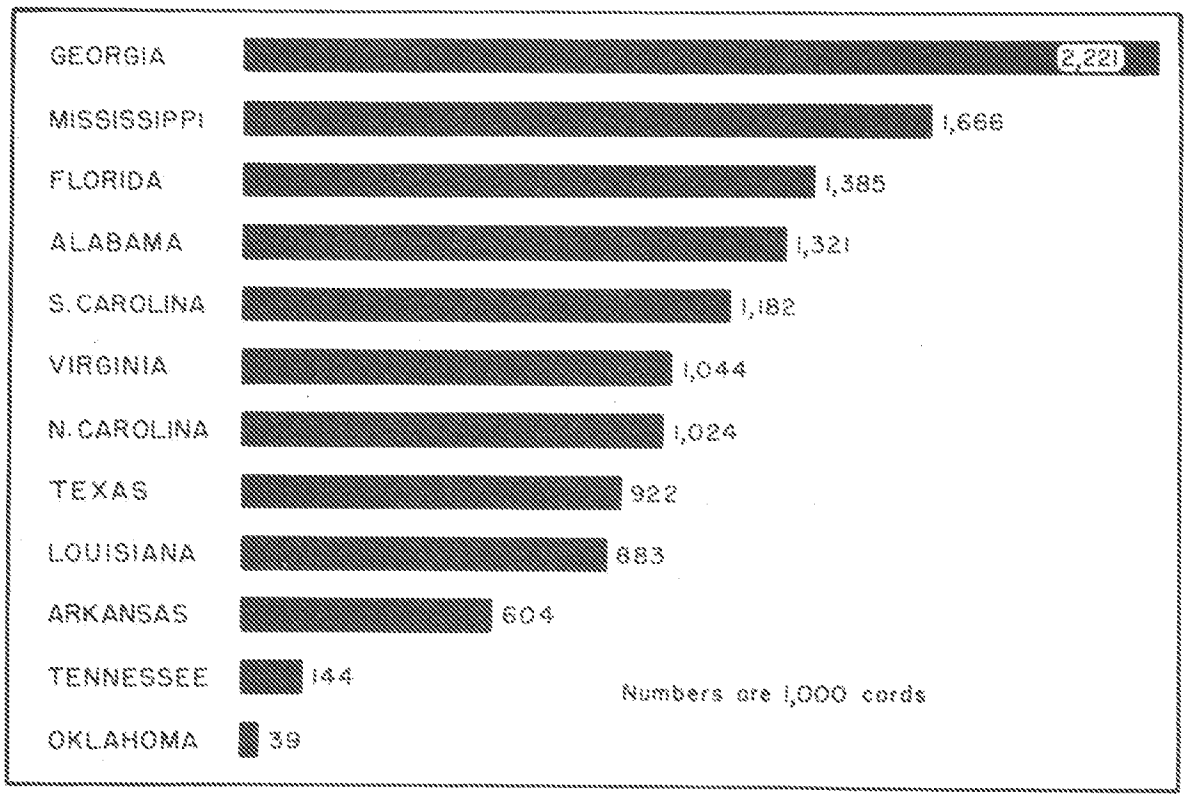

Figure 2.—Pulpwood production in the South, 1950

It is likely that the pattern of pulpwood production over the region will undergo important changes within the next few years. Under the defense accelerated tax amortization program, certificates of necessity have been issued for construction of approximately 6,230 tons daily of additional pulping capacity in the South, or 27 percent over present pulping capacity. A part of the additional capacity will come through expansion of existing mills, and a part through construction of new mills. Several other applications for accelerated tax amortization are being considered by the National Production Authority, but decision on them has not yet been reached. Tables 16, 17, and 18 list plants now drawing wood from the South, industry expansions for which certificates of necessity have been issued under the accelerated tax amortization program, and other construction that has been announced.
